**ORE DEFINITION, STRIPPING AND DRILLING
AT LYNDHURST COPPER-SILICA ZONE**

Rouyn-Noranda, Quebec, Canada. GLOBEX MINING ENTERPRISES INC. (GMX -Toronto, G1M - Frankfurt, Stuttgart, Berlin, Munich, Xetra and GLBXF - U.S. Pink Sheets) is pleased to inform shareholders that it has signed an agreement with privately owned Agrégat R-N Inc., whereby Agrégat can earn a 50% working interest in the #1 copper-silica zone at Globex's Lyndhurst Mine property, located 35 km north of Rouyn-Noranda, Quebec.

Under the agreement, Globex will provide technical expertise while Agrégat will provide manpower, earth moving equipment and drills as well as pay all expenses related to the stripping, delineation and analysis of the #1 Zone.

The #1 Zone is a copper-silica zone located east of the Lyndhurst Mine which was trenched and drilled in the 1950's. In October 2004, the zone was intersected in Globex hole L04-2 which assayed **1.36% Cu, 26.5 g/t Ag and 74.6% SiO₂ (silica) over a core length of 7.38 m.** This mineralized section is part of larger core length which assayed **0.83% Cu and 76.8% SiO₂ over 17.17 m.**

The initial program will consist of removing overburden from much of the mineralized area and then following up with a grid of percussion drill holes to a depth of 10.5 m. Rock chips from the drilling will be analyzed in order to determine if sufficient grade and tonnage exist to allow open pit mining of the zone. If the results are positive, a bulk sampling program will be permitted with profits from the operation being divided 50-50 between Globex and Agrégat with Agrégat charging the project mining and transport at cost.

If the first phases of work indicate economic profitability, additional ore delineation will be undertaken and an application to mine at the site will be submitted.

Globex retains 100% interest in the remainder of the property which covers 1,994 hectares and includes the historic Lyndhurst Mine and more recent deep Moses copper-zinc discovery to the west.
