

**Note: The following is a portion of Falco’s Press Release dated June 18, 2018 regarding the 2017 Donalda 4,934 m of drilling principally of the historical near surface Donalda Gold Deposit.**

**Falco is currently drilling deeper to test for Horne style copper-gold mineralization on horizons separate from the one that localizes the Donalda Gold Deposit.**

## **Drill Results from 2017 Donalda Drilling**

MONTREAL, June 18, 2018 (GLOBE NEWSWIRE) -- Falco Resources Ltd. (TSXV:FPC) (“Falco” or the “Company”)

### **Exploration Program**

The Donalda drilling program was initiated in February and is ongoing.

On Donalda, drill holes have intersected the lateral extensions of the known gold bearing veins and identified favorable horizons for VMS mineralization in the Quemont extensions. The targets were tested to a depth of up to 1,500 metres vertical. The best results obtained are presented in the Table 1. To note, most highlighted assay results originate from the 2017 program, which have now been entirely received and assayed. Some assay results from the 2018 drilling have been received, however the majority of assays are pending.

Table 1:

<b>DDH</b>	<b>From (m)</b>	<b>To (m)</b>	<b>Description</b>	<b>Au (g/t)</b>	<b>Core Length (m)</b>
<b>DONALDA</b>					
17996-17-01	194.5	196.0	Vein 1	0.05	1.5
17996-17-02	154.5	169.1	Vein 1	1.48	14.6
17996-17-03	301.0	305.3	Vein 1	0.40	4.3
17996-17-04	313.0	315.0	Vein 1	4.55	2.0
17996-17-05	75.5	86.5	Altered sheared rhyolite with 1-5% disseminated Py. VG in a Py cluster.	2.22	11.0
	130.5	131.5	Vein ?	1.69	1.0
	153.7	154.3	Vein 1	3.91	0.6
	290.0	290.5	Donalda Fault/Vein 5	21.60	0.5
17996-17-06	141.7	142.8	Vein 1	3.03	1.1
17996-17-08	289.5	295.3	Vein 1	3.28	5.8
17996-18-09	610.7	611.2	Vein Qz Cb	2.41	0.5
17996-18-11	54.0	56.7	Vein 1	0.97	2.7
	590.8	591.9	Vein Qz Cb and 5%Py	4.80	1.1

In addition to the Donalda drilling program, four drill rigs have recently been mobilized to test two large underexplored areas with high potential of discovery for new VMS lenses. The targets are located near the eastern extensions of Quemont, as well as the West Zone and extensions towards Horne 5, where mineralization was identified during 2016 drilling campaign (refer to press release October 31 2016).

Our exploration program also includes deep geophysical surveys, combining innovative surface and borehole techniques, on the Donalda, Quemont and Horne West properties.

**Qualified Person**

Mr. Claude Bernier, Exploration Manager, (P.Geo. Eng.) is the qualified person as defined by National Instrument 43-101 who has reviewed and verified the technical information relating to the exploration program and results contained in this news release.

**QA/QC**

Falco has implemented a strict quality-control program to comply with best practices in the sampling and analysis of drill core. As part of its QA/QC program, Falco inserts certified external mineralized standards and blanks within shipment composed of 24 samples. In the mineralized zones, every shipment is composed of 21 rock samples, one standard, one blank and a pulp duplicate to test the laboratory analysis methods and precision for each shipment of samples. Blanks and standards are inserted within the normal sample number sequence, while the duplicate is asked at the end of a batch. Assay results and certificates of analysis are interpreted and reported on a regular basis. If anomalies are detected, the laboratory is advised and the entire batch of samples is re-assayed. In non-mineralized zones, every shipment is composed of 24 samples, which includes a standard and a blank. If anomalies are detected, the laboratory is advised, but the batch of samples is not necessarily re-assayed.

**About Falco**

Falco Resources Ltd. is one of the largest mineral claim holders in the Province of Québec, with extensive land holdings in the Abitibi Greenstone Belt. Falco owns about 67,000 hectares of land in the Rouyn-Noranda mining camp, which represents approximately 70% of the entire camp and includes 13 former gold and base metal mine sites. Falco's principal asset is the Horne 5 Project located in the former Horne mine that was operated by Noranda from 1927 to 1976 and produced 11.6 million ounces of gold and 2.5 billion pounds of copper. Osisko is the largest shareholder of the Company and currently owns 13.2% of the issued and outstanding shares of the Company. The Company has 180,620,244 shares issued and outstanding.
